Payne Introduces Its Highest Efficiency Condensing Gas Furnace

INDIANAPOLIS, Aug. 11, 2008 – Payne Heating and Cooling recently introduced a new line of condensing gas furnaces that delivers the highest gas efficiency the company has to offer, operating at 95 percent AFUE (Annual Fuel Utilization Efficiency).

The variable speed blower on the furnace reduces humidity and enhances comfort during the cooling season. It also makes the unit more efficient by working only as hard as necessary to maintain a consistent temperature, contributing to energy savings.

Homeowners switching from an older, standard 78 percent AFUE furnace will notice significantly less gas usage with Payne's new condensing gas furnaces. A 92.1 percent AFUE model is also available.

Payne's condensing gas furnaces are built for durability and efficiency. The heat exchanger is covered under a 20-year parts limited warranty. Payne has also introduced a new 10-year parts limited warranty for the gas furnace available to the original owner if registered within 90 days.

About Payne Heating and Cooling

Payne Heating and Cooling is a division of Carrier Corp. Headquartered in Farmington, Conn., Carrier is the world's largest provider of heating, air conditioning and refrigeration solutions. With 2007 revenues of \$14.6 billion, Carrier has approximately 43,000 employees worldwide and operations in more than 170 countries. Carrier is part of United Technologies Corp., a Hartford, Connecticut-based provider of products and services to the aerospace and building systems industries worldwide.
